Who is GGtoor Inc.?

GGtoor, Inc., (OTCMKTS: GTOR) (“GGtoor”, “GTOR”, or the “Company”), Is publicly traded company an emerging leader in the youth sports, family sports entertainment, and has aggressively entered the eSports market. Our vision is to create a portal for players, organizers, and leagues a place for the eSports lovers. The global gaming industry has been developing at a fast pace in recent years. With all that GGtoor is getting ready to be part of the exponential growth of the industry. GGtoor Inc. entered the Metaverse by purchasing 4144 Virtual Commercial lots in TCG.World.

Mission Statement: To create opportunities for enthusiasts in esports by empowering and partnering with them to organize events and play the game they love.

We have created an interactive website that will provide an array of different options allowing self-registration for players, organizers, and leagues to compete on all scheduled events. Each registrant will have their administration panel, the ability to update their profile, and to see their stats and competitor's stats scorecard in real-time. Organizers can set up events for games and submit them to us for approval based on our requirements.

TCG World
metaverse
Live, Play, Earn

Who is **TCG.World**?

TCG World represents a living virtual world, or in other words, a metaverse. Metaverse is a new type of game concept where users can interact with each other in a virtual space. For TCG World users, it means they can earn TCGCoin 2.0, hunt for NFT collectibles, invest in virtual real estate, create and explore, and start their own online career.

TCG stands for Trading Card Game. It consists of several elements working together such as TCGCoin, TCG Trading Platform, and TCG World.

TCGCoin 2.0 is the main foundation element for two online economies. This methodology drives a continuous demand for the tokens across a wide array of both physical and virtual transactions. The trading platform uses smart contracts to protect buyers and sellers holding their funds until the goods are received and finally verified.

A metaverse is an online virtual world where real people from all over the globe can log in at any time and get together for different purposes, such as entertainment, socializing, trading, and more. It is a virtual world where physical laws can be changed, and the impossible becomes possible but with real people, and therefore, real opportunities.

What Is the **Metaverse**?

The Metaverse is a virtual world that uses blockchain technology, augmented reality, virtual reality, digital assets, tokens, etc. It's a virtual space created to increase the users' online experience.

As it will include sensory elements, users will be able to interact with digital objects similar to the real world.

Can Anyone **Access the Metaverse?**

With the right tools, anyone can access the Metaverse. The Metaverse is envisioned as a free space where everyone can join in and interact with one another.

However, for this to happen, governments will need to offer better internet facilities, and users will need to get access to certain devices such as VR headsets to enjoy the Metaverse. But at the moment, no one is restricted from entering the Metaverse.

What Are the Use Cases of Metaverse?

● Property Ownership

● Finance

● Gaming

● Fashion

● Marketing

● Retail

● Art Galleries

● Virtual Shows

● Architecture

● Education

● Entertainment

● Sport Franchises

What Is the Role of VR And AR In the Metaverse?

Virtual reality (VR) and Augmented reality (AR) will play a huge part in offering an immersive experience for the users of Metaverse. With virtual reality, the users can see the Metaverse using the headset.

It will give a full 360-degree view of the Metaverse. On the other hand, AR glasses will be able to connect the Metaverse with the real world. Here, AR will project the digital objects into the real world, and people will be able to interact with them.

Why invest in the **Metaverse Real Estate**?

At first, it may seem a little tricky to wrap your head around the concept. But the truth is, not unlike real estate investors who acquire tangible property for passive income and other motives, investors are turning to these virtual parcels of land for hundreds of millions in investments for these same reasons. One cyberspace—encapsulating virtual reality, artificial intelligence, games, and mobile technology explanation is that the metaverse is a digital world that's parallel to the real world—something akin to.

Forward-thinking real estate entrepreneurs firmly believe in a digital future: locations that exist entirely online and are accessible only by logging on. These same entrepreneurs are already accumulating this land in the same way they do with traditional real estate. Some brokers are already selling luxury real estate plots in the metaverse. And just like traditional investments, when the demand for these plots increases, so does their value.

Why TCG.World?

Unlike other Metaverses TCG.World is built on a Gaming platform called Unity this gives the end user a realistic graphical interface when interacting in the metaverse. When you play a game, have meeting or just hang out the quality of the environment is very rich and define.

When you own a real estate property you can build , decorate park your car in your drive way or drive it and interact with all your NFT's such as painting , virtual clothes and everything you can create. Decentralization is a main feature of Metaverse. It means no single entity or company will have dominance over the virtual world.

Why GGToor City?

GGToor purchased an entire city all we own is commercial Real Estate in TCG.World to date we have made the biggest Virtual Real Estate purchase in any metaverse which consist of 4144 commercial plots.

We are bring all the traffic from our eSports events. We are partnering with Music producers, movies studios, videos, live entertainment ,education and soon in multiple languages.

In this shared virtual space known as metaverse land, real estate is purchased through virtual real estate platforms. It's possible to buy everything from land parcels to structures. There is limited availability, which often results in competitive bidding amongst buyers. Purchases involve non-fungible tokens, or NFTs, that act as real deeds, and the blockchain serves as a registry, providing a record of the transaction. Once a metaverse land sale is concluded, owners can sell, rent, or build on their virtual property.
